

Adding Character to Lectora Courses

Ron discussed how Boston University converted 2000 pages of instructor-led project management training into 11 Lectora eLearning courses. BU created and used an animated interactive character within these eLearning courses using Character Builder software. The challenge included converting 600 audio clips to animations within three months and with only 2 ½ students! Ron presented on Socially Intelligent Interfaces, Benefits of Interactive Characters, How to Use Interactive Characters, Meet "Stan" (BU's character), Animating Characters, and Getting Characters into Lectora.
